GENIUS Token (GNS)

The V999 platform has issued its own exchange token, the GENIUS Token (GNS), which offers users an even better experience and (further) additional benefits on our trading platform.

The GENIUS Token runs natively on the Ethereum blockchain.

GNS Features

The GNS token allows users to access additional features within the V999 trading ecosystem and offers e.g. the possibility to create additional value via trade mining and / or holding the GNS by participating in the daily trading volume of the V999. The GNS is tradable with all cryptocurrencies listed on the V999 platform and provides additional liquidity within the V999 platform.

Difference between V999 and GNS

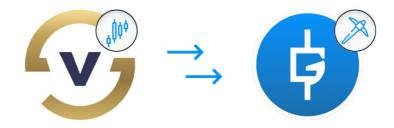

V999 Asset Backed Token

The V999 is an Asset Backed Token (ABT). These types of tokens are often offered during a Security Token Offering (STO) and have real value as they are correlated to the value of an external, real asset. Asset-backed tokens and security tokens offer secure, fast and low-cost trading of traditional assets via blockchain technology and also increase the liquidity of traditional securities.

For more information, read the V999 white paper on v999.gold.

GNS Utility Token

GNS is a utility token and serves as an operational token to earn digital gold on the V999 platform. The user receives GNS tokens through trade mining.

Trade Mining

Trade mining refers to the process of generating GNS tokens and has nothing to do with the conventional mining of cryptocurrencies, such as Bitcoin. Conventional mining is no longer lucrative nowadays, because in all cases too much electricity is consumed and it is no longer economically viable. Ecologically, it was a disaster right from the start.

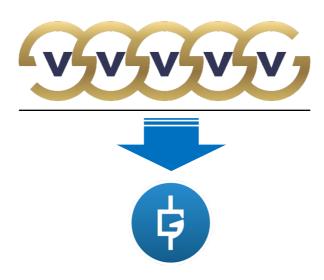

The basis of trade mining is the creation of GNS tokens, which are generated by trading V999 tokens.

The GNS is listed on the V999 platform from day one. As soon as the V999 token is traded on the trading market, the user automatically receives a certain number of GNS tokens according to the GENIUS algorithm. The new GNS token generated by trade mining is automatically booked into the user's wallet.

A trade counts if at least 1 V999 token was traded in a single trade. If less than 1 V999 token is traded in a single trade, it does not count.

Example:

The user executes V999 vs. Crypto trades on the trading market at any time and with any frequency. According to the GENIUS algorithm, in this example, after five executed trades of at least 1 V999 token per trade, the user generates 1 GNS token, which is automatically credited to the trader's wallet. Depending on how many new GNS tokens are generated through trade mining, the number of trades required for trade mining increases in order to receive new GNS tokens. For the exact number, see the table under GENIUS Algorithm.

By trading a certain number* of at least 1 V999 token, 1 GNS token is generated through trade mining.

*See GENIUS Algorithm

Hold GNS and earn Gold (V999)

Holding the GNS Token on the V999 platform wallet (Holding Program) offers the user the possibility to be rewarded with gold-backed V999 Tokens.

The following requirements must be met:

The user holds at least 150 GNS tokens on his/her wallet and is thus entitled to a pro rata 0.01% of the daily V999 trading volume from the trading market in the form of the gold-backed V999 token.

The user holds at least 500 GNS Tokens on his/her Wallet and is therefore entitled to a pro rata 0.02% of the daily V999 trading volume from the trading market in the form of the gold-backed V999 Token.

The user holds at least 1000 GNS Tokens on his/her Wallet and is therefore entitled to a pro rata 0.03% of the daily V999 trading volume from the trading market in the form of the gold-backed V999 Token.

The token is credited directly to the user's V999 wallet on a daily basis.

The user holds at least the minimum amount of GNS tokens on their V999 platform wallet and is therefore entitled to get **rewarded** from the daily V999 trading volume from the trading market **in the form of the gold-backed V999 token**.

GNS Distribution / Trade Mining / AirDrop / Incentive

A total of 900,000,000 GNS tokens will be generated in a one-time token generation event. From this point on, no further GNS tokens will be generated, so there will never be more than 900,000,000 tokens in circulation.

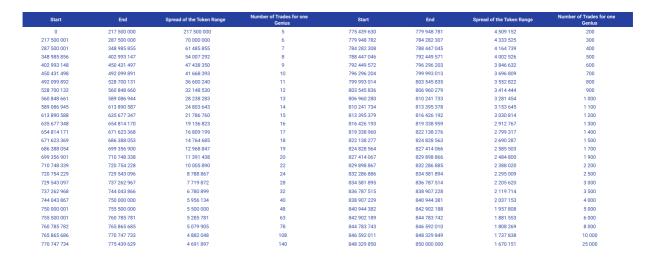

GNS tokens will be issued exclusively via trade mining on the V999 platform (reserved: 800,000,000 GNS) and via AirDrop or incentive purposes (reserved: 100,000,000 GNS).

GNS AirDrop

The first 1,000,000 KYC-verified users of the V999 platform will be credited with 50 GNS after 5 generating GNS through trade mining.

GENIUS Algorithm

The algorithm is the basis of GNS trade mining. It ensures that the correct number of necessary V999 trades are credited at all times and that the user receives his GNS tokens.

GNS Wallet

Every KYC-verified user receives his GNS Wallet on the V999 platform after clicking on "Generate Wallet Address" under the menu item "Wallets" next to GNS.

Summary

- As a platform token of the V999 platform, the GENIUS Token (GNS) offers further advantages for users.
- Max. Supply 900,000,000 GNS tokens of which 800,000,000 are issued via trade mining and 100,000,000 GNS tokens via AirDrops and Incentives.
- Trade Mining Users automatically generate GNS tokens when they trade V999 vs. crypto on the V999 trading market.
- Hold GNS an earn Gold (V999) Users are rewarded with V999 tokens when they hold their GNS tokens on the platform wallet.
- The first 1,000,000 KYC-verified users of the V999 platform will be credited with 50 GNS after 5 generating GNS through trade mining.
